

```
[1]: import pandas as pd
df = pd.read_csv("chickwts.csv")
```

```
[2]: df.head()
```

```
[2]:
```

	Unnamed: 0	weight	feed
0	1	179	horsebean
1	2	160	horsebean
2	3	136	horsebean
3	4	227	horsebean
4	5	217	horsebean

```
[3]: df.groupby("feed")["weight"].agg(["min", "mean", "max"])
```

```
[3]:
```

	min	mean	max
feed			
casein	216	323.583333	404
horsebean	108	160.200000	227
linseed	141	218.750000	309
meatmeal	153	276.909091	380
soybean	158	246.428571	329
sunflower	226	328.916667	423

Sunflower is the correst choice. It has highest min, mean, and max. Soybean is often cheaper. Along with corn, it is also industry standard, but weight is the priority and sunflower feed produces the largest chickens across the board. Soybean ranks 3rd for min and 4th for mean and max.
